- **Cabling and Maintenance**

Since being founded in 1999, United Technologies UK limited has worked at the forefront of technology. UTL Telecom Solutions has been creating bespoke solutions for businesses as the industry transitions from traditional PaBX/analog lines through ISDN, to modern day solutions such as Hosted VoIP and SIP Trunks.

Despite our growth over the years, United Technologies has remained true to its traditional values of providing a great service to its clients, big or small. With our experienced engineers and technicians, we provide our clients with the confidence that we will deliver the most effective solutions and a modern, lightning fast and robust system for years to come.

What makes United Technologies stand out over other companies, is our attention to detail and workmanship. We pride ourselves in not only providing a robust and complete system, but also ensuring all installations are done to the highest quality.
